

Weekly Meeting Log

Group: The Optimizers

Members: 1. Vidhi Marathe 28902 2. Anmol Gupta 27257 3. Nunavath Saidulu 26534

Week 1 Tasks:

	Responsibilities and Work Completed
Vidhi Marathe	Inspected the anonymised token sequences, class counts and length distributions; summarised the A/B imbalance and initial EDA findings.
Anmol Gupta	Set up the leakage-safe stratified evaluation protocol and built the first TF-IDF n-gram baseline for token sequences.
Nunavath Saidulu	Compared initial classifier behaviour and documented why token-frequency features alone were insufficient; identified the need for sequence-structure features.
Plan for next week	Move from EDA and baseline TF-IDF to richer sequence features.

Week 2 Tasks:

	Responsibilities and Work Completed
Vidhi Marathe	Implemented deterministic sequence statistics covering length, entropy, repetition, compression and related signals.
Anmol Gupta	Added static sequence-geometry features and character/word TF-IDF representations, including the SVD feature block.
Nunavath Saidulu	Developed and tested alternative base learners and organised fold-wise feature preparation so label-dependent quantities stayed inside the training fold.
Plan for next week	Add positional language-model signals and compare heterogeneous learners.

Week 3 Tasks:

	Responsibilities and Work Completed
Vidhi Marathe	Built the positional class-conditional n-gram language model with smoothing, position bins and likelihood-ratio summaries.
Anmol Gupta	Integrated the heterogeneous base learners into a stacking pipeline and generated the out-of-fold matrix for the LogisticRegression meta-learner.
Nunavath Saidulu	Ran the controlled ablation on raw Markov scores, investigated the scale problem, and recorded the before/after results for the report.
Plan for next week	Complete stacking, run the controlled ablation, and prepare final evaluation.

Week 4 Tasks:

	Responsibilities and Work Completed
Vidhi Marathe	Re-ran the full stack over five random seeds and averaged the test probabilities to produce the final bagged prediction file.
Anmol Gupta	Consolidated the submission history, prepared the error-analysis material, and wrote the Results and Conclusion sections.
Nunavath Saidulu	Reviewed the final pipeline, submission metrics and limitations; consolidated the final report and submission package.
Plan for next week	Validate the final submission, consolidate results, and finish the report.
